

DeeplinkX

External app deeplink call toolkit

Flutter Plugin

The Goal

- Need to open a WhatsApp chat
- Need to show your brand profile page on Instagram app
- Need to ask users to review in the App Store app

In short - interact and trigger specific actions in other apps

The Way

To be able to interact with external apps you need a specific

Deeplink

Deeplinks are URLs that take the user directly to a specific screen inside the app, without the need for manual navigation.

❌ Manual Way

1. Research for the target app supported deep links (often no official docs)
2. Find sutaible way to call deeplink (app link / intent / universal link)
3. Detect current platform
4. Add necessary permissions
5. Check the target app is installed (reliable way per platform)
6. Call deeplink with available plugins like url_launcher
7. Check the target app launched otherwise fallback to web

✅ DeeplinkX Way

1. Add deeplink_x plugin to your project

```
$ flutter pub add deeplink_x
```

2. Import deeplink_x and create instance

```dart
import 'package:deeplink_x/deeplink_x.dart';

void main() {
  final deeplinkX = DeeplinkX();
}
```

3. Add necessary permissions

4. Lauch action

```dart
await deeplinkX.launchAction(Instagram.openProfile('username'));
```
